ALL THE ADMIRATION OF AN ACQUAINTANCE

ALL THE ALFECTION OF A SON

AND

ALL THE GRATITUDE OF A PUPIL

The want of a practical English-Sanskrit Dictionary is felt so much at the present time that it calls for no apology for an attempt to remove that want, although it will probably be unanimously admitted that the task is beset with the greatest difficulties Sanskrit has long ceased to be a living language and its intiquity has been mixed up with all that imagination could inspire and veneration could support. Its grand and varied literature is, to a considerable extent, shut up in distant manuscupts and special works on special subjects have yet received but very scanty attention. A variety of causes has alienated thể modern dialects from their mother tongue, making it often unsaft to draw any inferences from their usage * The Light of the West has not yet even spread over the surface of our society and any deviations from the established opinions will be set down by our veteran Sanskritists as audacious and preposterous It will be considered foolishness to maintain that our revered grammarian Panini did not exhaust the subject of idiomst.

o It must however be admitted that they are serictimes of very great use in determining the exact sense of words which have not been clearly defined by any Sansan textographer. Take, for instance the word पिष्टिय The Bengali word विशव derived from it shows its owner maning and clears the apparent obscurity of such pressages as रपाव में सीपियस विशव हि

[†] The first commentators of Planus were aware of his commences at though they filled them up in a circuitous way. Take for instance, the use of the planus in the case of proper names in the sense of family or race. It is is not to be found in the Ad take but supplied by the commentators. But there are other idenois which so far as in y knowledge extends, are not noticed by any grammanan. Take, for instance the use of the demonstrative pronouns with the percessly pronouns. The came of these, onussions is apparent. Our ancestors I ad all the Advantages of a

VI PRFFACE

evidence to the contrary t

although my critics will probably agree with me that if father of grammar was ignorant of any other refined language, and was not therefore in a postion to treat the subject falls. It will be considered arroganos to assert that our popular lexicographer Amara Sinha confounded the language of conversation with "theirtenial language," although it may be shown that such language is not confined to the drama, but used able in procead poetrs in the romances and tales. It will be considered imprudence to question the correctness of his definitions and by but the mistakes in his grouping of synonymous terms, although there may be the strongest grounds and the electred.

. 2 These are some of the difficulties in the way of this attempt-difficulties which would probably starger the most accomplished scholar of the day. They are Joubly telling on a man of my humble accumements, conscious alike of the poverty of intellectual gifts which are necessary for its execution and of the mubility to devote uninterrupted and long-continued aftention which is essential for its success. And I can assure my real rethat I should have gladly left at to those, who add profound knowledge of Sanskrit to high philological attrumments and have successfully used their powers in the highest intellectual achievements But, unfortunately, Sanskrit researches seem yet to attract but yery few scholars, and I know of none who is employing or is about to employ his abilities in the elucidation of this branch of study. It is, therefore, with some reluctance that I am devoting my leisure hours in the compilation of this work, neither intending nor pretending to produce a comprehensive work, but with a view to remove some of the difficulties in the way of this very interesting language and to mile it approach the level of the classics of the West. The worl is expected to be complete in three volumes of not less than 600 pages each and I now present the first volume with the hope that, in the absence of any other work of the kind, it m is be of some use to the students of the most copious, most refined, most philosophical language of the world-students whose number is every day increasing and every day spreading all over the englised world

Of the sare of the work will 1 and larger than I expected in Much 1876 1 sory I have in consequence to raise the pince of the work when I that the related of two clotimes. I also reget the diagram is appearance owing to causes which I need not all the to Bit II open the econd volume will be more pinctually out by the beginning and the till they the end of the next year.

PPTI ACT IN

abnormal and rare in the days of classical Singlant and we have a finite different expression for it. Kulluka, for instance, uses an fixed a c, "born of a different father" to indicate this relation and I have little doubt that my readers will agree with me in thinking that it is in complete accordance with the ideas of our ancestors.

- 6 Then there are what I may term accidental equivalents, that is, words which do not represent the real sone of the English words, but are practically used for them in a limited senso or for a limited class of ideas. Take, for instance, the word firsts. This word literally means ending in first According to the quibbles of Punini, Sanskart causal verbs are firsts and are therefore called firsts. But the word will never be applied to causal verbs of other languages, and I consider it wrong to apply the term as me causal. In such case, I have taken the greatest care to find out and give the real equivalents and to explain the meaning and usage of the accidental equivalents.

 7 It must also be remembered that distinctions observed.
- 7 It must also be remembered that distinctions observed in Sanskart are not always observed in English and wee tersa Words, which are only allied to each other in one language, are sometimes represented by one and the same word in another language, the shades of difference being subordinated to the prominent idea convoyed by them all In such cases, I have always tried to explain the broad distinctions observed in Sanskart. I have also tried to note the distinctions observed in English, when such distinctions are not hostile to the spirit of the former language. The object of this work is to explain the meeties of Sanskart and not of English and I have thought it improper to enter into a field which would involve the invention of unpecessary words or modes of expression.
- 8 In the case of the second class of words, I have not coined words to murder the ideam of the language, but have

×

illustrated than uply cifations from classical writers. Take, for instance, the word see e.g. There is no equivalent in Sunshit for this word, but the, be a was known to our one-stor, and there are numerous instances of its use. I have given some examples and I hope my readers will of no difficulty in unferstunding how the adea is expressed in Sanskrit and how to hindle the mode of expression in other combinations.

With reference to the third class of words, my views Amost coincide with those expressed not long ago by our dis tinguished countryman Dr. Rajen lea Lal. Mitra. To com new equivalents, expressive of the prominent ideas conveyed by new scientific and philosor higal terms, is not only in harmony with the genius of the San krit language who e phaney and malleability are unsurpassed, but as billely to ficultate the study of science and I hilosophy among our countrymen, who are not acquainted with foreign tongues. It not only climinates the repulsive character of hard uncouth foreign terms. but at the same time impresses the memory with certain ideas or attributes which must necessarily be associated with those terms. When this object cannot be attained, it is better to retain them in Sanskrit garb and in such cases, I have either done this or ex-I lained the sense in Sanskrit In the case of some new worls. I am indebte i to the lalours of my predecessors, lut in many cases. I have taken on myself the responsibility of their introduction when I have found that the force of the English words are not well expressed by their words. But I have marked all new words with asterisks to show my reiders that they are not sanctioned by classical usage and to enable them to use other words should these inventions to found fulf. with

IPITICL

give dibourte, but not necessarily, literal equivalents. For in times, I have fraction as the equivalent of "day star not because affectoresponds with star, but because the compound fully expresses the idea of the English expression and has been used in the same sense by Suskirt writers.

11 With these preliminary remarks, I may say that I have prominently marked the diff rent senses of English words, specially when they are represented by different Sanskut equi valents I have used much care to find out the nearest in I most common equivalents in croli sense and taken great pains to arrange them according to their usefulness and frequency I have attempted to note their construction briefly, when I couhar or different from the construction of the corresponding English words I have tried to illustrate their use by citations from classical writers, specially when my readers are apt to misimderstand their use in combination with other words. The laws of growth, developement and rumifications of words are probably the same all over the world and I have strived to exemplify this not only by showing that the same words with the same original senses are used in both the languages in many same secondary senses, but also by noticing some of the most remarkable coincidences in what may appear at first sight, their most peculiar idioms. I have kept in view the great difficulty of the particles of the English language and tried to go thoroughy into them by sufficiently illustrating the different shades of meaning as differently expressed in Sansl rit. Verbs followed by particles are often used in English in quite different senses from the original verbs and many English phrases, such as arising from be awake, belonging to, feel asl amed, of age we generally peculiarly expressed in Sanskrit I have put both such compound verbs and phrases before the prominent notice of my readers by inserting them among the words themselves

12 Obsolete and technical words of rate occurrence have

AH PIFFACY

no place in my dictionary. I have also for the most part omit, ted to record normal compounds and particulas 1 or the former, my readers must look to the sample words which term the compounds and for the latter ample information will be found in the published Sinskrit grimmare. To include their will be to increase the size of the book without in the least enhancing its utility. With the same object, I have made as few repetitions as possible. If the student does not find suffi cient information under any word, le is requested to look to the references made. If the student does not find a phrase under any of its components, he must not give up that it does not occur at all in my work before the other components are looked into For instance, the phrase tooth and neal is given under not and he must not despair if he does not find it under tooth This absence of rejetition is of some inconvenience to the stu lent but it will be more than compensated by the consequent reduction of the bulk of my work and comparative cheapness of its price

13 As to the mechanical part of my work, I must first draw the attention of my readers to the abbreviations explained on pages at to ax I should also add that every. Fing Ish word has been mostly expressed by its first letter followed by a dot, when any example is cited under it. For in time, under Addition, and note by the assembled gods is printed "adly life assembled gods." The same letter a means act under Addition and follow under ALLOW, and so on

14 As regulds the Sunshit part of my work, I lave, in the case of substantive, either given the singular number of the nominative case or when the base cannot be easily inferred from it, the base with its gender or genders in brackets. In the case of adjectives, when the base is the same for all the it ree gend is as frageq. I have given it is base and marked futful within brackets. When the bis it the same for two

PRETACT.

vio.

genders, I have either given this base and the other base with gender within brackets, or given the nominative singular in the masculine gender, and indicated the nominative singular in the other two genders within brackets. In the case of verbs, I have given the third person singular present tense and exhibited the root in brackets—the root such as would be under a rational classification and not necessarily what is given in Sanckrit works on roots. Adverbs are generally expressed by certain cases of the corresponding substantives and adjectives. But they are practically indeclinable and requirence or replanation. The prepositions are mustly put after the wo they govern.

15. In this place, I may also remark that the formation of Sanskrit compounds is in many cases almost unlimited. In such cases, I have eatisfied myself by giving some typical examples and leaving the student to form other compounds on the same plan.

16. I am indebted to Dr. Smith's English-Latin Dictionary for the plin of my work. I have also received much assistance from Wilson's Sanskrit-English Dictionary, Monier Williams' English-Sanskrit Dictionary, Webster's English Dictionary, Subda Kalon Druma, and a few other works.

17. In conclusion, I must express my thanks to the Governments of the Panjab and N. W. Provinces for subscribing to my work and to Lord Northbrook for being the first and foremost to encourage its publication. I should also thank my other subscribers for their encouragements and to the Indian Press generally for taking a kind notice of it. Nor must I omit to thank professor Max Muller, the most renowned, if not the most accomplished scholar of the day, for his very favor-

[&]quot; As regards the Governments of India and Bengal, I may say that His Honor the Lieutenant Governor of Bengal has been pleased to express that he will pass orders about it on the appearance of my work.

able opinion on the first 64 pages of this work, which has not a little encouraged me to persevere in these very difficult, however interesting, researches. Irrespectus of the disadvantage under which I he, a first attempt of this nature must necessarily contain many mustakes and omissions and I shall be under great obligations to my readers and reviewers if they would favour me with their remarks and general suggestions, as it would be not only assisting the cause of Sanskrit but possibly also of its nodern descendants.
